

Product Info: “Scream Cream”

Ingredients	L-Arginine and Aminophylline compounded in a light vanishing cream base.
How does it work?	Increases genital bloodflow resulting in an enhanced clitoral and vulvular sensation during intercourse.
Who will benefit?	<ul style="list-style-type: none">· Scream Cream works best for those who have a sex drive, but are unable to achieve an orgasm.· Studies have reports that over 43% of women in the US experience no satisfaction from clitoral orgasm and only 25% achieve orgasm with intercourse.
Response from Patients?	<ul style="list-style-type: none">· Patients that are most satisfied are postmenopausal women with decreased sexual response to touch and arousal.· Patients report easier, faster orgasms and are able to gain control over their orgasmic ability.
Directions for Use	Massage a pea-sized amount with fingertip into area covering inside labia as well as clitoris. Apply 15-20 minutes prior to intercourse.
How it's supplied	Scream Cream is packaged in a 15 gram tube. Average day supply is 60-90 days.
What to watch for	<p>Patients with a history to the above listed ingredients should not use this product. Patients with a history of genital herpes should use this product with caution, as L-arginine may facilitate production of the herpes virus. Patients may experience prolonged sensitivity up to two hours after application. Gentle washing with warm water can help remove excess product.</p> <p>Reference: Dr. J. Kaminetsky, New York Univ.
